

## **An important and necessary task for COP28 - the climate meeting in Dubai.**

Now one must focus on obtaining a scientific verification of the greenhouse effect from CO<sub>2</sub> in the atmosphere. That must be a task for COP28.

In the 1980s, researchers established the fact that such a verification does not exist. And to date, no such verification has emerged. In contrast, measurements show that there is no correspondence between global temperature and CO<sub>2</sub> in the atmosphere. It tells us that CO<sub>2</sub> does not control global temperature.

One should focus on bringing out and highlighting these facts, because they show that there is no greenhouse effect from CO<sub>2</sub> in the atmosphere. Because you cannot continue to go ahead with costly and economically devastating CO<sub>2</sub> emission reduction measures that have no effect on the climate.

Now the Climate Panel must prove its legitimacy or leave!
